OBJECTIVE: Software Engineering Intern | Next Step Program 2026

EDUCATION

Bachelor of Software Engineering

Expected Graduation: June 2028

- **Relevant Coursework:** Data Structures and Algorithms, Software Lifecycle, Relational Databases (SQL), Cloud Development, Object-Oriented Programming.

TECHNICAL SKILLS

- **Languages:** Python, Java, SQL, JavaScript, HTML/CSS.
- **Backend & DevOps:** REST APIs, Docker, Git/GitHub, Cloud Development Concepts
- **Data & AI:** Pandas, Scikit-Learn, Web Scraping (BeautifulSoup/Selenium), Prompt Engineering.
- **Spoken Languages:** Portuguese (Native), English (Intermediate).

PROFESSIONAL EXPERIENCE

Grupo Elfa | Process Automation Intern (Innovation & AI)

July 2024 – Present

- **Architected a scalable automation framework** for onboarding/offboarding workflows using Python, ensuring 100% compliance in continuous access audits and reducing manual effort.
- **Engineered a centralized data integration layer** via REST APIs to consolidate corporate information, eliminating decentralized spreadsheets and improving data integrity for stakeholders.
- **Developed robust web scraping solutions** to extract and structure large-scale external data, enabling data-driven market intelligence and executive decision-making.
- **Engineered a machine learning** demand forecasting engine using Python, Pandas, and Scikit-Learn to analyze multi-variable data, optimizing inventory levels and reducing projected stockouts by 30%.
- **Architected an automated** purchasing pipeline integrated with the corporate ERP via REST APIs, replacing manual spreadsheet-based processes and minimizing financial losses from expired inventory by an estimated 20%.

VOLUNTEER & LEADERSHIP EXPERIENCE

Escrevendo na Quebrada | Process Automation Lead

September 2025 – Present

- **Designed and deployed a WhatsApp Chatbot** with intelligent conversation flows to automate student support, significantly increasing the organization's capacity to scale its impact.
- **Lead technical process mapping** and automated the tracking of public education notices (editais), streamlining access to academic opportunities for underprivileged students.

Educafro | Programming Instructor

April 2025 – August 2025

- **Instructed foundational Computer Science concepts** and Python logic to diverse student groups, fostering technical inclusion.
- **Developed an internal automated grading system**, reducing administrative overhead by 50% and allowing more time for personalized student mentorship.

TECHNICAL PROJECTS

Predictive Analytics: Population Growth (Machine Learning)

- Built a predictive model using Python and Scikit-Learn to analyze demographic trends, focusing on statistical accuracy and data visualization to support future planning.
